The pulmonary hypertension heart

## **Pulmonary hypertension puts unbearable stress on the heart.** **We're putting our heart into finding a cure.**

Often misdiagnosed - as asthma, for example - Pulmonary Hypertension (PH) can cause death from heart failure. There is no cure. But at the Pulmonary Hypertension Association, we're giving hope to PH patients and caregivers. Learn how you can help at [www.PHAssociation.org](http://www.PHAssociation.org)

#Heart2CurePH

In 2015, the Pulmonary Hypertension Association launched a new public service ad campaign to educate people around the world about a life-threatening disease too often misdiagnosed as asthma.

Pulmonary hypertension (PH), which some call “the other high blood pressure,” is high blood pressure in the arteries of the lungs that can lead to death from right-sided heart failure. Without treatment, the average survival time for PH patients is 2.8 years after diagnosis. Because the symptoms include shortness of breath and chest pain, PH is often misdiagnosed.

Join us in promoting **#Heart2CurePH** by sharing our materials with your friends and social networks.
